Drilling will be done with air. After setting and cementing 7" surface casing @ 80', a 6 1/2" hole will be drilled with coring of any oil zones in the Kaibab formation. Density, Gamma-Neutron and Induction logs will be run (Welex). Open hole testing is planned and, if indicated, 4 1/2" casing cemented (Halliburton) above oil zone and the interval acidized (Halliburton). Well will be bailed and a pumping unit may be installed. This well is a diagonal offset to the Travis Federal #1-24. As there was no observed pressure in the Travis or Shields #1-24 wells, a blowout preventer may not be necessary. All State and Federal regulations will be observed.
